Let's get to the bones of it

GreenGrown Glucosamine® is produced through a worldwide patented fermentation process from a glucose (vegetable source) base. **A second patented process enables the determination as to whether the glucosamine was produced from corn or its derivatives or from shellfish.**

This stops substitutions and verifies customers receive vegetable source materials.

The facts:

- GreenGrown® is the industry's leading source for high-quality, vegan, microbial-fermentation-derived glucosamine
- Pure vegetable source guaranteed: Patented identity protection
- It is demonstrated as being safe and effective in helping patients with osteoarthritis
- Certified non-GMO by Eurofins.
- Quality verified through NSF certified laboratory
- Ideal for the rapidly growing vegetarian and vegan market, those prone to allergies as well as consumers shopping for supplements that are GMO-free.
- Kosher
- Clean label compliant

This key ingredient is available as:

- USP Glucosamine Sulfate (powder)
- USP Glucosamine Hydrochloride (powder)
- USP Glucosamine Sulfate (granular / chilsonated)
- USP Glucosamine Hydrochloride (granular / chilsonated)
- Glucosamine Sulfate (DTH, 95% granulation)
- Glucosamine Hydrochloride (DTH, 95% granulation).
